Abstract of DE19532360

The element (2) fastens a panelling component (1) to a supporting component (3), and has a first section (5) which can be connected to the former. It also has a second section (6) which can be inserted into an opening in the supporting component, and has equipment for sealing the opening. The first section has equipment which enables the clearance tolerances between the components to be equalised. The second section may have equipment in the region of the fixing point on the supporting component, which enables the positional tolerances between the components to be equalised perpendicular to the longitudinal axis (25) of the element. The element may also be formed in one piece.

Abstract of FR2702720

In order to premount a part of a motor vehicle, especially a trim strip, on a bodywork part, the said part comprising at least one arrangement for permanent mounting which can be engaged in a hole in the bodywork via a side thereof and interact with a complementary mounting arrangement employed on the other side of the bodywork, use is made of an element (100) comprising a first part (110) which can be engaged by pressure in a cavity in the part and comprises on its periphery flexible blades (112), of oblique general direction, interacting with the inner walls of the cavity in order to provide essentially irremovable anchoring of the said element onto the part, and a second part (130), integral with the first, which can be engaged by pressure in a hole in the bodywork and comprises at least one flexible stud (134) which can be anchored to the said bodywork at the rear of the hole
